

Amendments to the Claims:

This listing of claims will replace all prior versions, and listings, of claims in the application:

1 - 10 (cancelled)

5

11. (New)

A do-it-yourself kit for making the designs of the glans-stripper comprising:

several kinds of elastic ribbon, and

elastic ribbon with buttonholes,

10 flat cotton shoelace material in a length of about 15 meters winded around a piece of carton,
several kinds of bead-like shapes K(-),

means to fasten both ends of B like a fastener and means to adjust its size like a guy-rope of a tent, and

if wanted combined with less indispensable parts like:

means to relieve the urethra from the pressure of the ribbon, and

15 means to prevent the end of the shoelace material from ravelling, and

if wanted combined with a combination of the aids to put the parts together like:

firm sewing thread and needles and some means to get the thread trough the eye of the needle,

small rivets and a small pricker that fits into the hole of the tube-like shape placed square onto the bottom
part of the rivet,

20 fishing thread,

glue,

bags or small boxes to keep the constructed glans-strippers in, and it can be combined with

instructions or a manual or a text like the description of this application explaining about the glans-
stripper and how the several designs can be made and how they can be used.

25

12. (New)

A do-it-yourself kit containing elastic ribbon with buttonholes as recited in claim 11 wherein the ribbon

consists out of two parts with a row of buttonholes placed in line in between them, and in between these

buttonholes means to connect the two parts of the ribbon and these means are especially suited to have the

30 middle of part B wrapped tight around it like in design 2 by having a length and a width and a height small
enough not to create a disturbing lump, and the length is also small enough to keep the minimal distance
required to adjust the size of A as small as possible, and these means can be made of the same material the
two parts of the ribbon are made of, or they can be made using a thicker and more durable thread, or these
means can be

35 made from plastic, or they can be

made from metal, or they can be

made from fishing-thread, or they can be

made from shoelace material, and

the width of one of the parts of said elastic ribbon can be bigger than the other so the row of

40 buttonholes will be closer to one side of the elastic ribbon instead of being in the middle, and

an elastic cord can be placed in between the two parts of the ribbon to connect the two parts as it goes from one part to the other with regular steps of half a buttonhole long, and
the elastic ribbon can contain markings to give an indication about its length like a tape-measure.

5 13. (New)

A do-it-yourself kit containing flat cotton shoelace material as recited in claim 11 wherein said shoelace material is flat woven cotton shoelace material commonly used in sport-shoes in a length of about 15 meters winded around a piece of carton,
with markings on the shoelace material which gives an indication of its length.

10

14. (New)

A do-it-yourself kit containing several kinds of spherical bead-like shapes K(-) as recited in claim 11 wherein said bead-like shape can contain two or more holes, and

the extra hole can be parallel with the first hole, and

15

the extra hole can be at an angle with the first hole, and

the extra hole can lead from the outside of K(-) onto another hole, and

the extra hole can contain a screw, and

the extra hole can contain a pin with some free space at the crossing point with the first hole, and

the shape of K(-) can be made out of two parts, one with a gully and the other with a ledge, and

20

at the bottom of the gully and at the top of the ledge there can be a rugged structure, and

the two parts can be hinging, and

the two parts can be pressed together with countersink screws, and

the two parts can be pressed together with a clasp, and

the space between two holes can be removed to connect two parts of the holes, and

25

K(-) could be combined or integrated with a female screw being a pair with a screw or a bolt with a head that is round and flat and thin and rounded like the underside of a rivet, and

K(-) could be more like a small sausage as if the spherical shape has been divided into two parts and a shape looking like one or more round coins has been placed in between them, and

the part of K(-) that is supposed to lay upon the penis can be flattened, and

30

both sides of K could be flattened to be more like a discus, and

the spherical shape of K(-) and a second flattened more discus-like shape of K(-) can be integrated with each other to be more rounded of as if they were one part.

15. (New)

35 A do-it-yourself kit containing a means to relieve the urethra from the pressure of the ribbon as recited in claim 11 wherein said means is shaped like a small archers bow made out of a bend rectangle which ends are bend outward, both ends contain a small slit big enough to fit the elastic ribbon or the shoelace material.

16. (New)

40 A do-it-yourself kit containing means to prevent the end of the shoelace material from ravelling as recited in

claim 11 wherein these means are small plastic tube-like forms, and
these tube-like forms are curled up rectangles, and
they can also be tube-like with no cut and made out of plastic that can be shrunk to fit tight after
being placed in position, and
5 they can have a rough surface on the inside.

17. (New)

A do-it-yourself kit as recited in claim 11 wherein one or more parts has structures or shapes attached to it to
stimulate or to decorate.

10

18. (New)

A glans-stripper made with the do-it-yourself kit as recited in claim 11 comprising a part A being formed by
a piece of elastic ribbon, and both ends of the ribbon are indissoluble connected to each other, and the outline
of part A will be small enough to fixate the foreskin at the root of the erection without blocking the
15 circulation of the blood, and part B being a piece of flat cotton shoelace material is connected indissoluble
with its middle near to one side of the ribbon, and both halves of B are led through the same bead-like shape
K(-) that fits so tight it will not slip during normal use but it can be adjusted if wanted, and the length of B
being twice the outward distance measured from the top of the root of the penis round the root of the scrotum
and in between the legs to above the anus and from there to the belly increased with about 25 cm for each
20 half of B, and part K(-) being configured, in use, to clench B somewhere near or above the anus, and
as a means to fasten both ends of B a fastener combined with means to adjust its size like a guy-rope
of a tent like two small rectangles with a hole at each end.

19. (New)

25 A glans-stripper as recited in claim 18 wherein the elastic ribbon has buttonholes which are in line with each
other, the two ends of the ribbon are not connected to each other but one end is connected to the middle of
part B, as a fastener a version of K(-) is placed around the shoe-lace material of B at a distance from the
elastic ribbon that is not wider than the thickness of said ribbon, and
just to connect one end of A to the buttonhole at the other end of A the shoelace material can also
30 end at a distance of about 10 cm behind the fastener with a version of K(-) connected to its end and a
complete version of B connected a bit further on to the elastic ribbon.

20. (New)

A glans-stripper as recited in claim 18 wherein the elastic ribbon has been left out and has been replaced by
35 the middle part of part B, the fastener is the spherical bead like shape K(-) combined with a flattened and
more discus-like shape K(-), both shapes of K(-) fit so tight one has to use strength to move them, before B is
led through the two pieces of B in between these two shapes of K(-) B is led through a little noose made of a
piece of shoelace material.
